

Amendment

In the Claims:

Please amend claims 1, 24, 25, 36, 40 and 41 as shown in the complete list of claims below.

1. (Currently Amended) A plurality of mounts releasably adhered to a single sheet of a backing material, each mount being made of a single material and being a mount for mounting paper to glass, and comprising a body having a first surface carrying an adhesive coating capable of adhering the mount to a sheet of paper to form a mountable arrangement, and a second surface capable of securing such a mountable arrangement directly to glass without adhesive.
2. (Original) A plurality of mounts according to claim 1, provided in the form of a roll.
3. (Original) A plurality of mounts according to claim 1, provided in the form of a flat sheet.
4. (Original) A plurality of mounts according to claim 1, wherein the first and second surfaces of each mount are mutually opposite.
5. (Original) A plurality of mounts according to claim 1, wherein the first surface of each mount is capable of adhering the mount only to a part of one surface of the sheet of paper to form the mountable arrangement.
6. (Original) A plurality of mounts according to claim 1, wherein each mount is capable of releasably securing the mountable arrangement directly to glass.
7. (Original) A plurality of mounts according to claim 1, wherein the first or second surface of each mount is flat.
8. (Original) A plurality of mounts according to claim 1, wherein each mount is flexible.
9. (Original) A plurality of mounts according to claim 1, wherein each mount is transparent.

9. (Original) A plurality of mounts according to claim 1, wherein each mount is transparent.
10. (Original) A plurality of mounts according to claim 1, wherein each mount comprises a plastics material.
11. (Original) A plurality of mounts according to claim 10, wherein each mount further comprises a plasticiser.
12. (Original) A plurality of mounts according to claim 11, wherein each mount comprises at least 55 parts plasticiser per 100 parts plastics material.
13. (Original) A plurality of mounts according to claim 10, wherein the plastics material is polyvinyl chloride.
14. (Original) A plurality of mounts according to claim 1, wherein the thickness of each mount is up to 2mm.
15. (Original) A plurality of mounts according to claim 14, wherein the second surface area of each mount is in the range 100mm² to 900mm².
16. (Original) A plurality of mounts according to claim 1, wherein the first or second surface of each mount is square, rectangular, triangular or circular.
17. (Original) A plurality of mounts according to claim 1, wherein the second surface of each mount is not capable of adhering the mount to paper.
18. (Original) A plurality of mounts according to claim 1, wherein each mount comprises a pigment material.
19. (Original) A plurality of mounts according to claim 1, wherein the backing material includes silicone.
20. (Withdrawn) A device for dispensing a mount including a plurality of mounts as defined in claim 1.
21. (Withdrawn) A method for making a plurality of mounts as defined in claim 1 comprising the steps of:
 - (i) providing the backing material;

- (ii) applying an adhesive coating to a surface of the backing material;
 - (iii) adhering releasably the mount material to the backing material; and
 - (iv) forming the plurality of mounts from the mount material.
22. (Withdrawn) A method according to claim 21, wherein the plurality of mounts is formed in step (iv) by cutting.
23. (Withdrawn) A method according to claim 21, wherein the adhesive is applied in step (ii) by a roller or a spray nozzle.
24. (Currently Amended) A mount for mounting paper to glass, comprising a body made of a single material and having a first surface carrying an adhesive coating capable of adhering the mount only to a part of one surface of a sheet of paper to form a mountable arrangement and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.
25. (Currently Amended) A mount for mounting paper to glass, comprising a body made of a single material and having a first surface carrying an adhesive coating capable of releasably adhering the mount to a sheet of paper to form a mountable arrangement and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.
26. (Original) A mount according to claim 25, wherein the first surface carrying an adhesive coating is capable of adhering the mount only to a part of one surface of a sheet of paper to form a mountable arrangement.
27. (Original) A mount according to claim 25, wherein the first or second surface of the mount is flat.
28. (Original) A mount according to claim 25, wherein the mount is flexible.
29. (Original) A mount according to claim 25, wherein the mount comprises a plastics material.

30. (Original) A mount according to claim 29, wherein the mount further comprises a plasticiser.
31. (Original) A mount according to claim 25, wherein the thickness of the mount is up to 2mm.
32. (Original) A mount according to claim 31, wherein the second surface area of the mount is in the range 100mm² to 900mm².
33. (Original) A mount according to claim 25, wherein the second surface of the mount is not capable of adhering the mount to paper.
34. (Original) A mount according to claim 25, wherein the first surface of the mount is adhered releasably to a backing material.
35. (Original) A mount according to claim 25, wherein the entire surface of the mount is adhered to less than half of the area of a surface of a sheet of paper for permitting the sheet of paper to be mounted to glass.
36. (Currently Amended) A method for securing a first material to a second material, comprising:

 releasably adhering a first surface of a mount to the first material with an adhesive coating carried by the first surface, wherein the mount and first material form a mountable arrangement; and

 securing a second surface of the mount to the second material without adhesive, where the first and second surfaces are mutually opposite and the mount comprises a body made of a single material.
37. (Previously Presented) The method according to claim 36, wherein the first material is a paper-based material.
38. (Previously Presented) The method according to claim 36, wherein the second material is a glass-based material.
39. (Previously Presented) The method according to claim 36, wherein the second material has a smooth surface.

40. (Currently Amended) A method for securing a first material to a second material, comprising:

adhering a first surface of a mount to a part of one surface of a sheet of paper with an adhesive coating carried by the first surface, wherein the mount and the sheet of paper form a mountable arrangement; and

securing a second surface of the mount to glass without adhesive, where the first and second surfaces are mutually opposite and the mount comprises a body made of a single material.

41. (Currently Amended) A mount arrangement for mounting paper to glass comprising:

a plurality of mounts, each mount comprising a body made of a single material and having a first surface carrying an adhesive coating capable of adhering the mount to a sheet of paper to form a mountable arrangement, and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.
